The Xerox scanning and archiving service can save time and cut costs.

This service is available through the CPC National Public Sector Framework for the provision of digital transformation services.

Xerox recently partnered with HM Land Registry to help them overcome the challenge of siloed data, paper-intensive processes, sophisticated cyber threats and maintaining compliance. Tapping into Xerox's expertise to completely digitise £8 trillion worth of title deeds dating back to 1862. This enabled property transactions to be confirmed in mere seconds, not months.

Through this strategic partnership, HM Land Registry was able to save time, cut costs and better serve their citizens through a faster, more positive and secure experience.

In a post-pandemic world, the next normal of government leaves no room for past inefficiencies, especially at a time when the need for essential citizen services is greater than ever.

You can [watch](#) Eve Foster, Central Operations Manager, HM Land Registry walk through the process of this remarkable digitisation journey and learn more about how they're transforming a tedious process that affects every single person in the UK into an event that removes months of uncertainty, distrust and unnecessary expense.
